

PROJECT DEFINITION

FLOKI INU - \$FLO

Floki Inu (\$FLO) was the first token created by the project team and will be treated as the "Parent Token" within the "Floki's Yard" Ecosystem.

Holders of \$FLO will repeatedly reap benefits from the ecosystem introduced, as outlined below.

FLOKI'S YARD

Floki's Yard is the name of the ecosystem that the project team are implementing. The intention is for Floki's Yard to be the host of the Parent (\$FLO) and Children Tokens (TBA). All Children tokens within the ecosystem will support Floki Inu, as the Parent Token, through their tokenomics.

There will be a variety of new dogs entering Floki's Yard - each new dog will have a token behind them and their tokenomics will boost \$FLO organically. Some examples of these tokenomics include (but are not limited to):

- % of transactions on the Child Token will BUY BACK \$FLO
- % of transactions on the Child Token will go towards \$FLO Marketing
- Holders of the Child Token will earn passive \$FLO as reward

PLAN FOR EACH CHILD TOKEN

01

Outline supporting tokenomics and implement these on the Child Token contracts.

03

Marketing for the new Child Token and \$FLO (combined marketing).

02

Completion of character design and artwork for the Child Token.

04

Launch Child Token and route new investors to \$FLO.

BENEFITS TO \$FLO

- Supportive tokenomics for \$FLO on each Child Token introduced to the Ecosystem.
- New Verified Contracts released for the Child Token, leading investors to investigate Floki Inu.
- Low MarketCap Children Tokens released, leading investors to investigate Floki Inu.
- Same core team behind Floki Inu and the Child Tokens, so investors know that their funds are with a trustworthy team.
